

Alfa Laval PureSOx Training

Practical instruction to optimize system use and maintenance

The more effectively your crew works with your Alfa Laval PureSOx system, the higher its reliability and the lower its cost of ownership. Training by Alfa Laval experts ensures crew skills in operation, maintenance and basic troubleshooting.

What we do

Alfa Laval provides two different trainings for PureSOx. One focuses on PureSOx operation, while the other focuses on maintenance and troubleshooting. Both offer practical hands-on instruction from our experienced trainers, as well as a permanently accessible e-learning module.

By raising crew competence and motivation, our skilled trainers help them optimize the use of your PureSOx system. Having a well-trained crew helps prevent unexpected issues and reduces both maintenance and operating costs.

Benefits

- Alignment of crew skills and knowledge that ensures safe operation and reliable performance
- Correct operation that reduces the risk of downtime
- Cost-effective troubleshooting of minor issues
- Optimized maintenance that extends lifetime and reduces costs
- Permanent e-learning access for review or to guide new crew members

Scope of service

Alfa Laval offers two types of PureSOx training:

- **Operation Training**

This training covers the operation of your PureSOx system.

After training the crew will understand:

- PureSOx basics and how the system works
- System components and their function
- Alarms and warnings

- **Maintenance Training**

This training covers maintenance procedures and basic troubleshooting, and asks the crew to work with example scenarios. The crew will gain an advanced understanding of:

- Tracing and resolving common system failures
- Non-compliance scenarios and their causes
- Maintenance schedules, scope and procedures

Both trainings combine hands-on instruction from an Alfa Laval expert with an e-learning module. Their exact content will vary depending on the specific configuration of your PureSOx system.

Scope of supply

Alfa Laval provides training for all Alfa Laval PureSOx systems, regardless of configuration.

The e-learning modules used in the training are provided on a portable medium. They require no internet connection, which means they can be used for review or as a guide for new crew members who miss the hands-on training.
