WEINMAN®

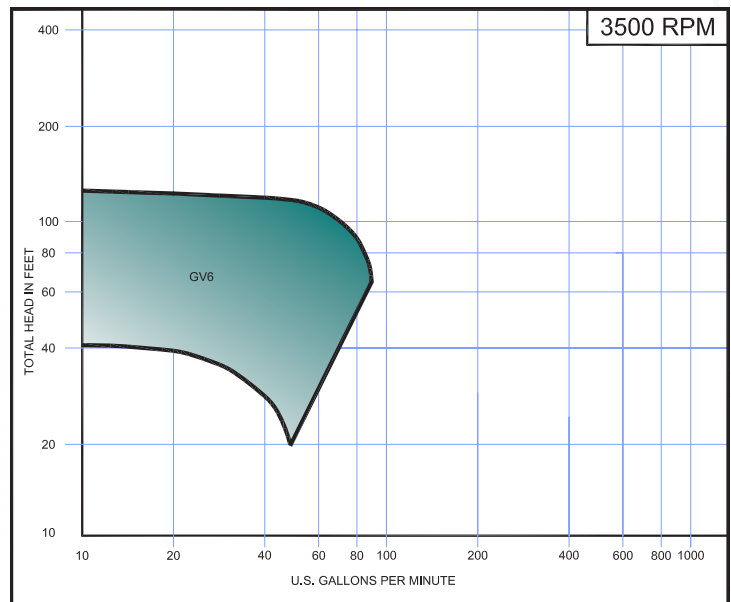

Condensate Return System Solutions

Crane Pumps & Systems offers two series of Condensate Return Systems, Burks GV series and Weinman 900 & 910 series. Weinman and Burks brands have been providing reliable solutions for over 100 years. The Burks and Weinman Condensate Return Systems save energy and reduce operating costs by allowing for the easy return of hot condensate.

Burks Condensate Return System

Model	GV Series
Flow Capacity	90 gpm
Heads to:	130'
Discharge Sizes	1.25"
HP	.33 - 3
RPM	3500
Continuous Temperature	200°F

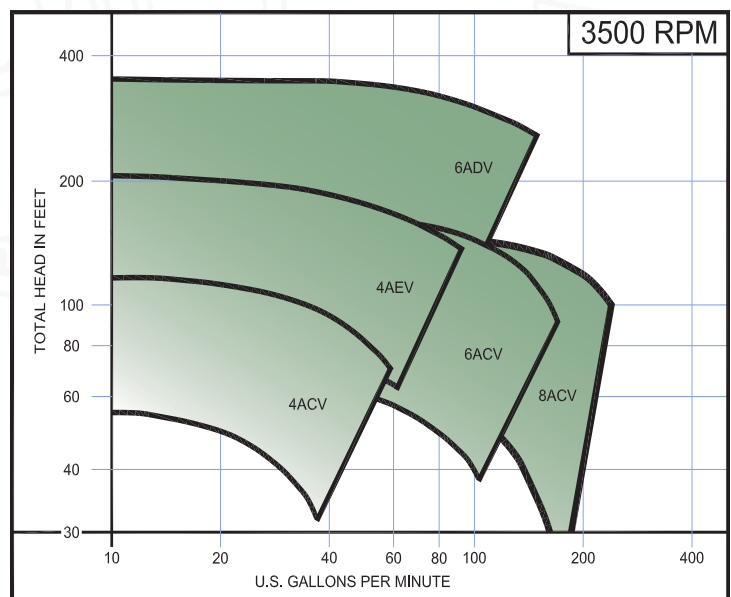

The Burks condensate return system is the ideal solution for a simple condensate return application. The system features the Burks GV6 inline pump and a cast iron receiver tank which provides years of service even in the aggressive environment of condensate water. With the Burks system you have the option of choosing either Simplex one pump operation, or a two pump Duplex Alternating configuration which helps to extend the life of the unit. The Burks system also has the option of incorporating a sight level gauge and thermometer, which are sold separately as accessories and installed in the field.

Weinman Condensate Return System

Model	900 & 910 Series
Flow Capacity	260 gpm
Heads to:	300'
Discharge Sizes	1" - 2"
HP	.33 - 20
RPM	3500 or 1750
Continuous Temperature	200°F

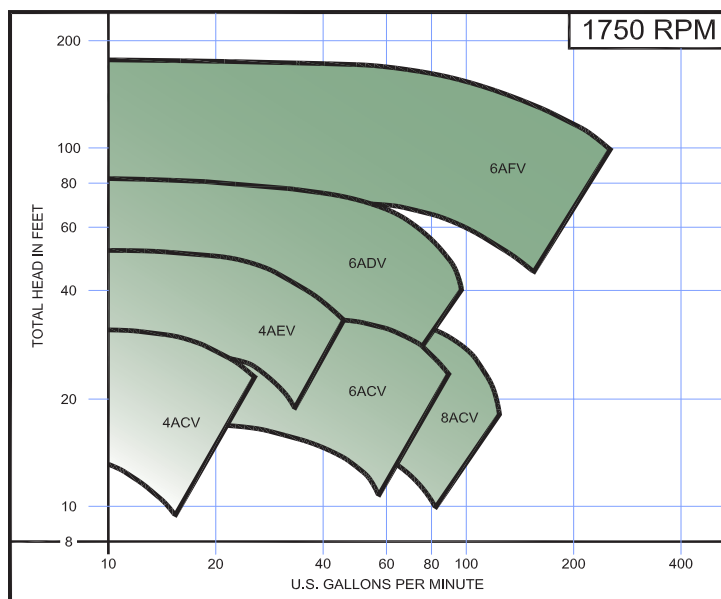

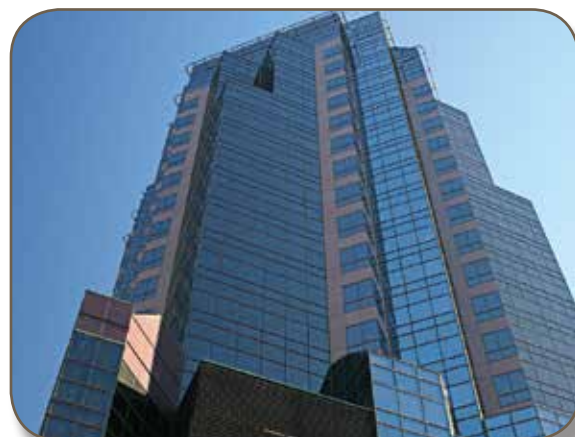

Weinman Condensate Return Systems are offered in Simplex and Duplex configurations. The Duplex Unit is designed for systems having extra heavy loads of condensate or other liquid return, or where a stand-by-pump is required. Both Simplex and Duplex Units are also available as a boiler feed unit with a solenoid operated make-up valve and contacts for pump operation. Isolation valves between the receiver and pump flanges are available.

Condensate Return Systems are used in commercial and industrial applications where the automatic return of hot water condensate from radiators and heating coils is needed.

Applications:

- Boiler Feed
- Energy Recovery
- Food Processing
