

HVAC SYSTEMS

CHILLED WATER, HEATING WATER, CONDENSER WATER, BOILER SYSTEMS, GEO-THERMAL & HEAT TRANSFER

FOR WHERE IT REALLY MATTERS

Norcross based SyncroFlo has over 50 years of experience manufacturing packaged pumping systems. We were the first to prepackage pumping systems for boosting pressure in domestic water distribution systems. SyncroFlo's pre-engineered packaged systems for HVAC applications are true plug and play systems. With savings of up to 15% over traditional site built systems and shorter manufacturing cycle SyncroFlo is the choice of some of the largest mechanical contractors and building owners around. With all systems being 100% functionally tested at the factory you can be assured the system performs as designed at the time of commissioning and many years into the future.

WHY A SYNCROFLO PRE PACKAGED SYSTEM?

All SyncroFlo systems are manufactured to the highest standards within the 155,000 square foot facility. SyncroFlo has a superior Quality Management System that is ISO 9001:2015 certified. All systems bear the UL labels and are certified to UL 778 and UL 508A standards. Many of the custom commercial systems also are certified to NSF/ANSI 61 & 372 standard to have the low lead certification for potable water. Control panels are assembled in a UL 508A panel shop with a QR (Quick Reference) code identification for web based access to the project documents. All systems are factory tested in a NIST traceable test stand and the results are recorded for generation of an XY plot.

QUALITY CONTROL AND TESTING!

SyncroFlo's quality control program is on the leading edge of technology for our industry. Each system is tracked at all stages of manufacturing, assembly, and testing with web based reporting via hand held devices. All welding is performed by AWS or ASME qualified welders. Once manufacturing and assembly are complete, the system is connected to our NIST calibrated test rig. We then hydrostatically test and flow test from zero to 100% of design and under specified suction and net delivery pressures. Once on site, your only surprise is how easy the system is to startup and commission.

HVAC - CHILLED WATER, HEATING WATER, CONDENSER WATER, BOILER SYSTEMS, GEO-THERMAL & HEAT TRANSFER

PUMP TYPES

Close and flex coupled end suction, vertical multistage, Vertical turbine & horizontal split case

PERFORMANCE

- 3" - 36" Discharges
- Flows to 15,000 GPM
- Heads to 400 PSI
