

# FORCE FIELD™ FIREWALL FILTRATION

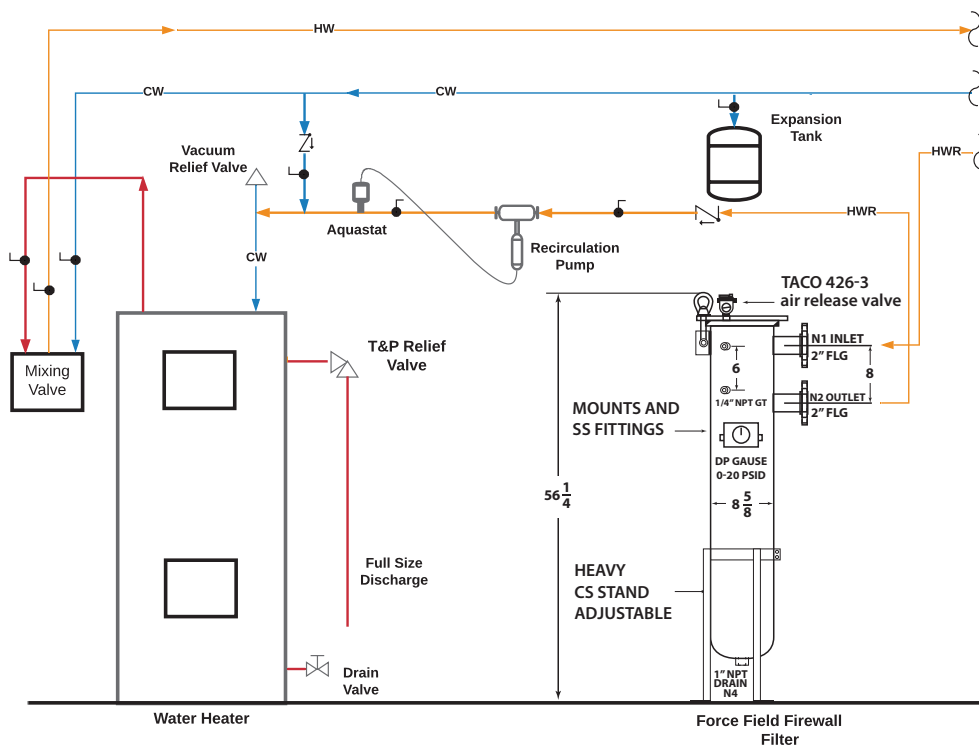

## Domestic Hot Water Safety System

## BENEFITS

Protecting the health & safety of tenants, guests, and patients is the #1 job for any building owner and operator. Adding a Domestic Hot Water Safety System to the return side of your hot water recirculating line ensures that harmful contaminants, like Legionella, do not re-enter your water supply from your existing hot water system.

This system removes 99.9% of Legionella from water using no chemicals and no electricity. Furthermore, we remove system-clogging grit and other potentially dangerous microbiologicals, heavy metals like lead and iron, and cellular debris that causes efficiency-sapping biofilms.

## FEATURES

- 1 Pre-packaged solutions from 35gpm to 450gpm
- 2 Removes particulate matter down to 0.001um equivalent, extending the life of expensive HVAC systems
- 3 Removes > 99.9% of viruses, bacteria and cysts
- 4 Removes > 99.9% of cellular debris that causes biofilms
- 5 Removes significant amounts of harmful metals like iron before they can oxidize & stain expensive fixtures
- 6 Removes > 98% of lead
- 7 Completely green! Requires no chemicals, no electricity
- 8 No backwashing required! Saves thousands in wasted water costs annually
- 9 Low maintenance
- 10 Pressure drop as low as 2psid (15psid max recommended)
